Co-supervised summer students at the University of Miami and other institutions starting in summer 2021, providing guidance and mentorship in their research endeavors. In particular:

- Schussheim, R., Yale University, main supervisor Megan Urry. The student presents the work "*Little Red Dots: The Search for AGN in $z > 7$ Galaxies Imaged with the JADES Survey*" at the 245th American Astronomical Society Meeting, Abstract ID 3360.
- Aspegren, O., Yale University, main supervisor Megan Urry. The student presented the work "*The Relative Sensitivity of eROSITA and Chandra or XMM to Heavily Obscured AGN*" at the 241st American Astronomical Society Meeting, Poster ID 301.11.
- Cook, C., University of Kansas, main supervisor Allison Kirkpatrick. The student presented the work "*The Relative Sensitivity of eROSITA and Chandra or XMM to Heavily Obscured AGN*" at the 237th American Astronomical Society Meeting, Poster ID 138.14.

Research Interests

I specialize in the study of Active Galactic Nuclei (AGN), focusing on variability, multiband surveys, and obscuration processes in both local and high-redshift AGN. I use X-ray and multiband data to investigate these processes, combining observations across different wavelengths. Additionally, I work extensively with Big Data, applying machine-learning techniques to AGN catalogs for population and evolution studies, with the goal of advancing our understanding of AGN physics and evolution.
